Workflow Engine

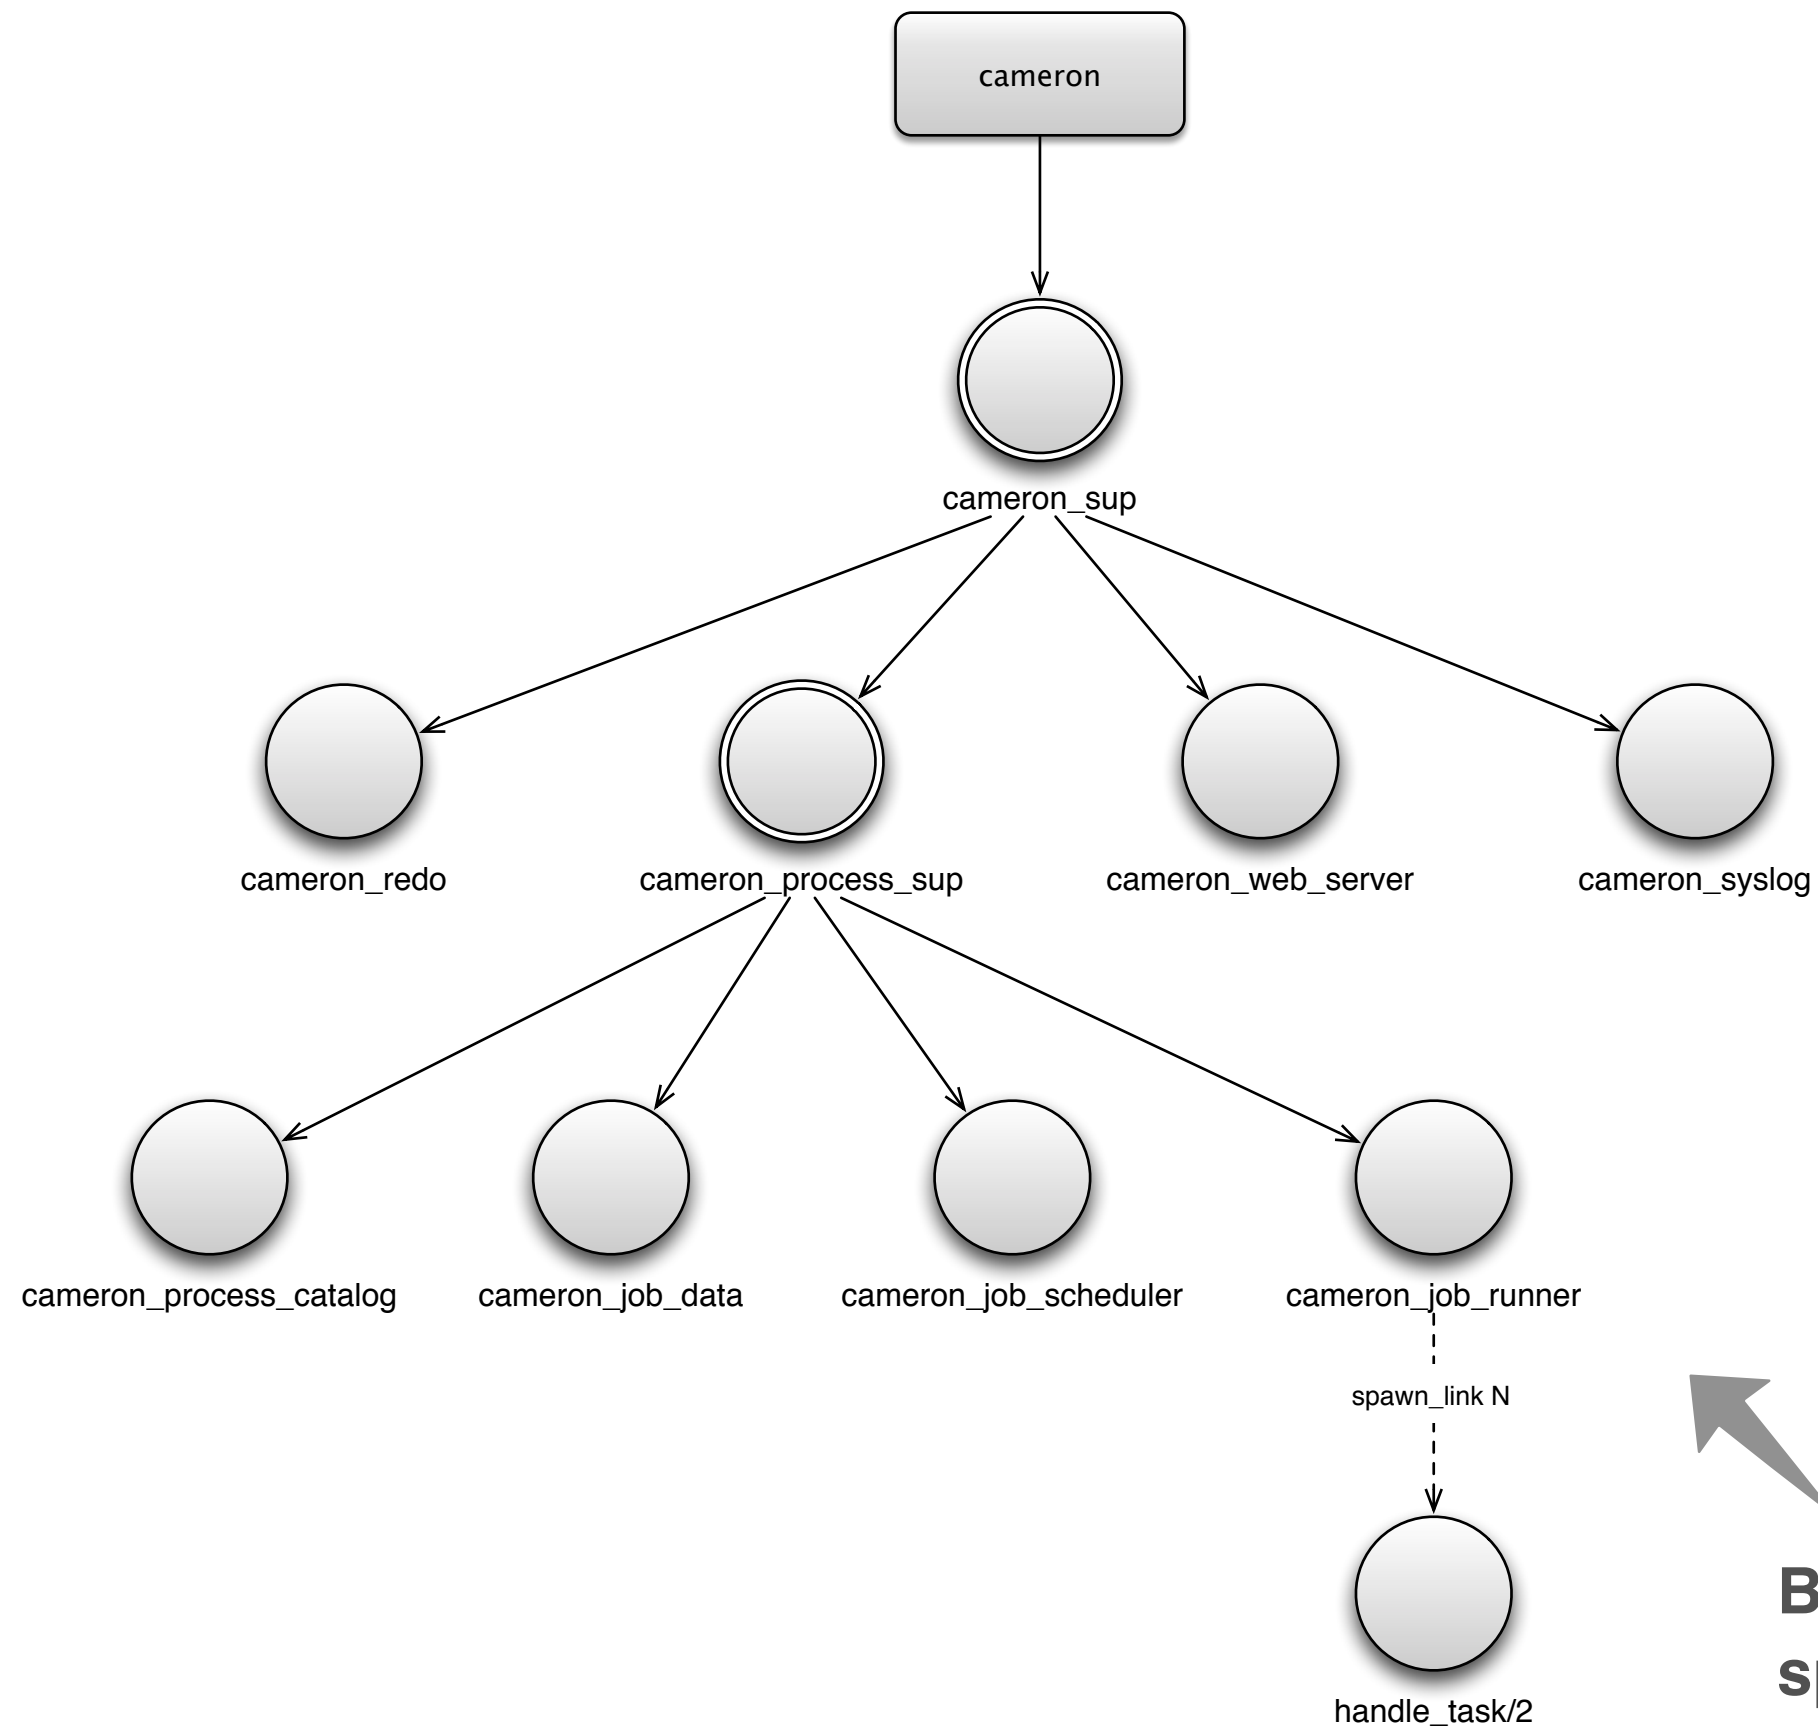

<https://github.com/leandrosilva/cameron>

Leandro Silva | @codezone
2011

What is it?

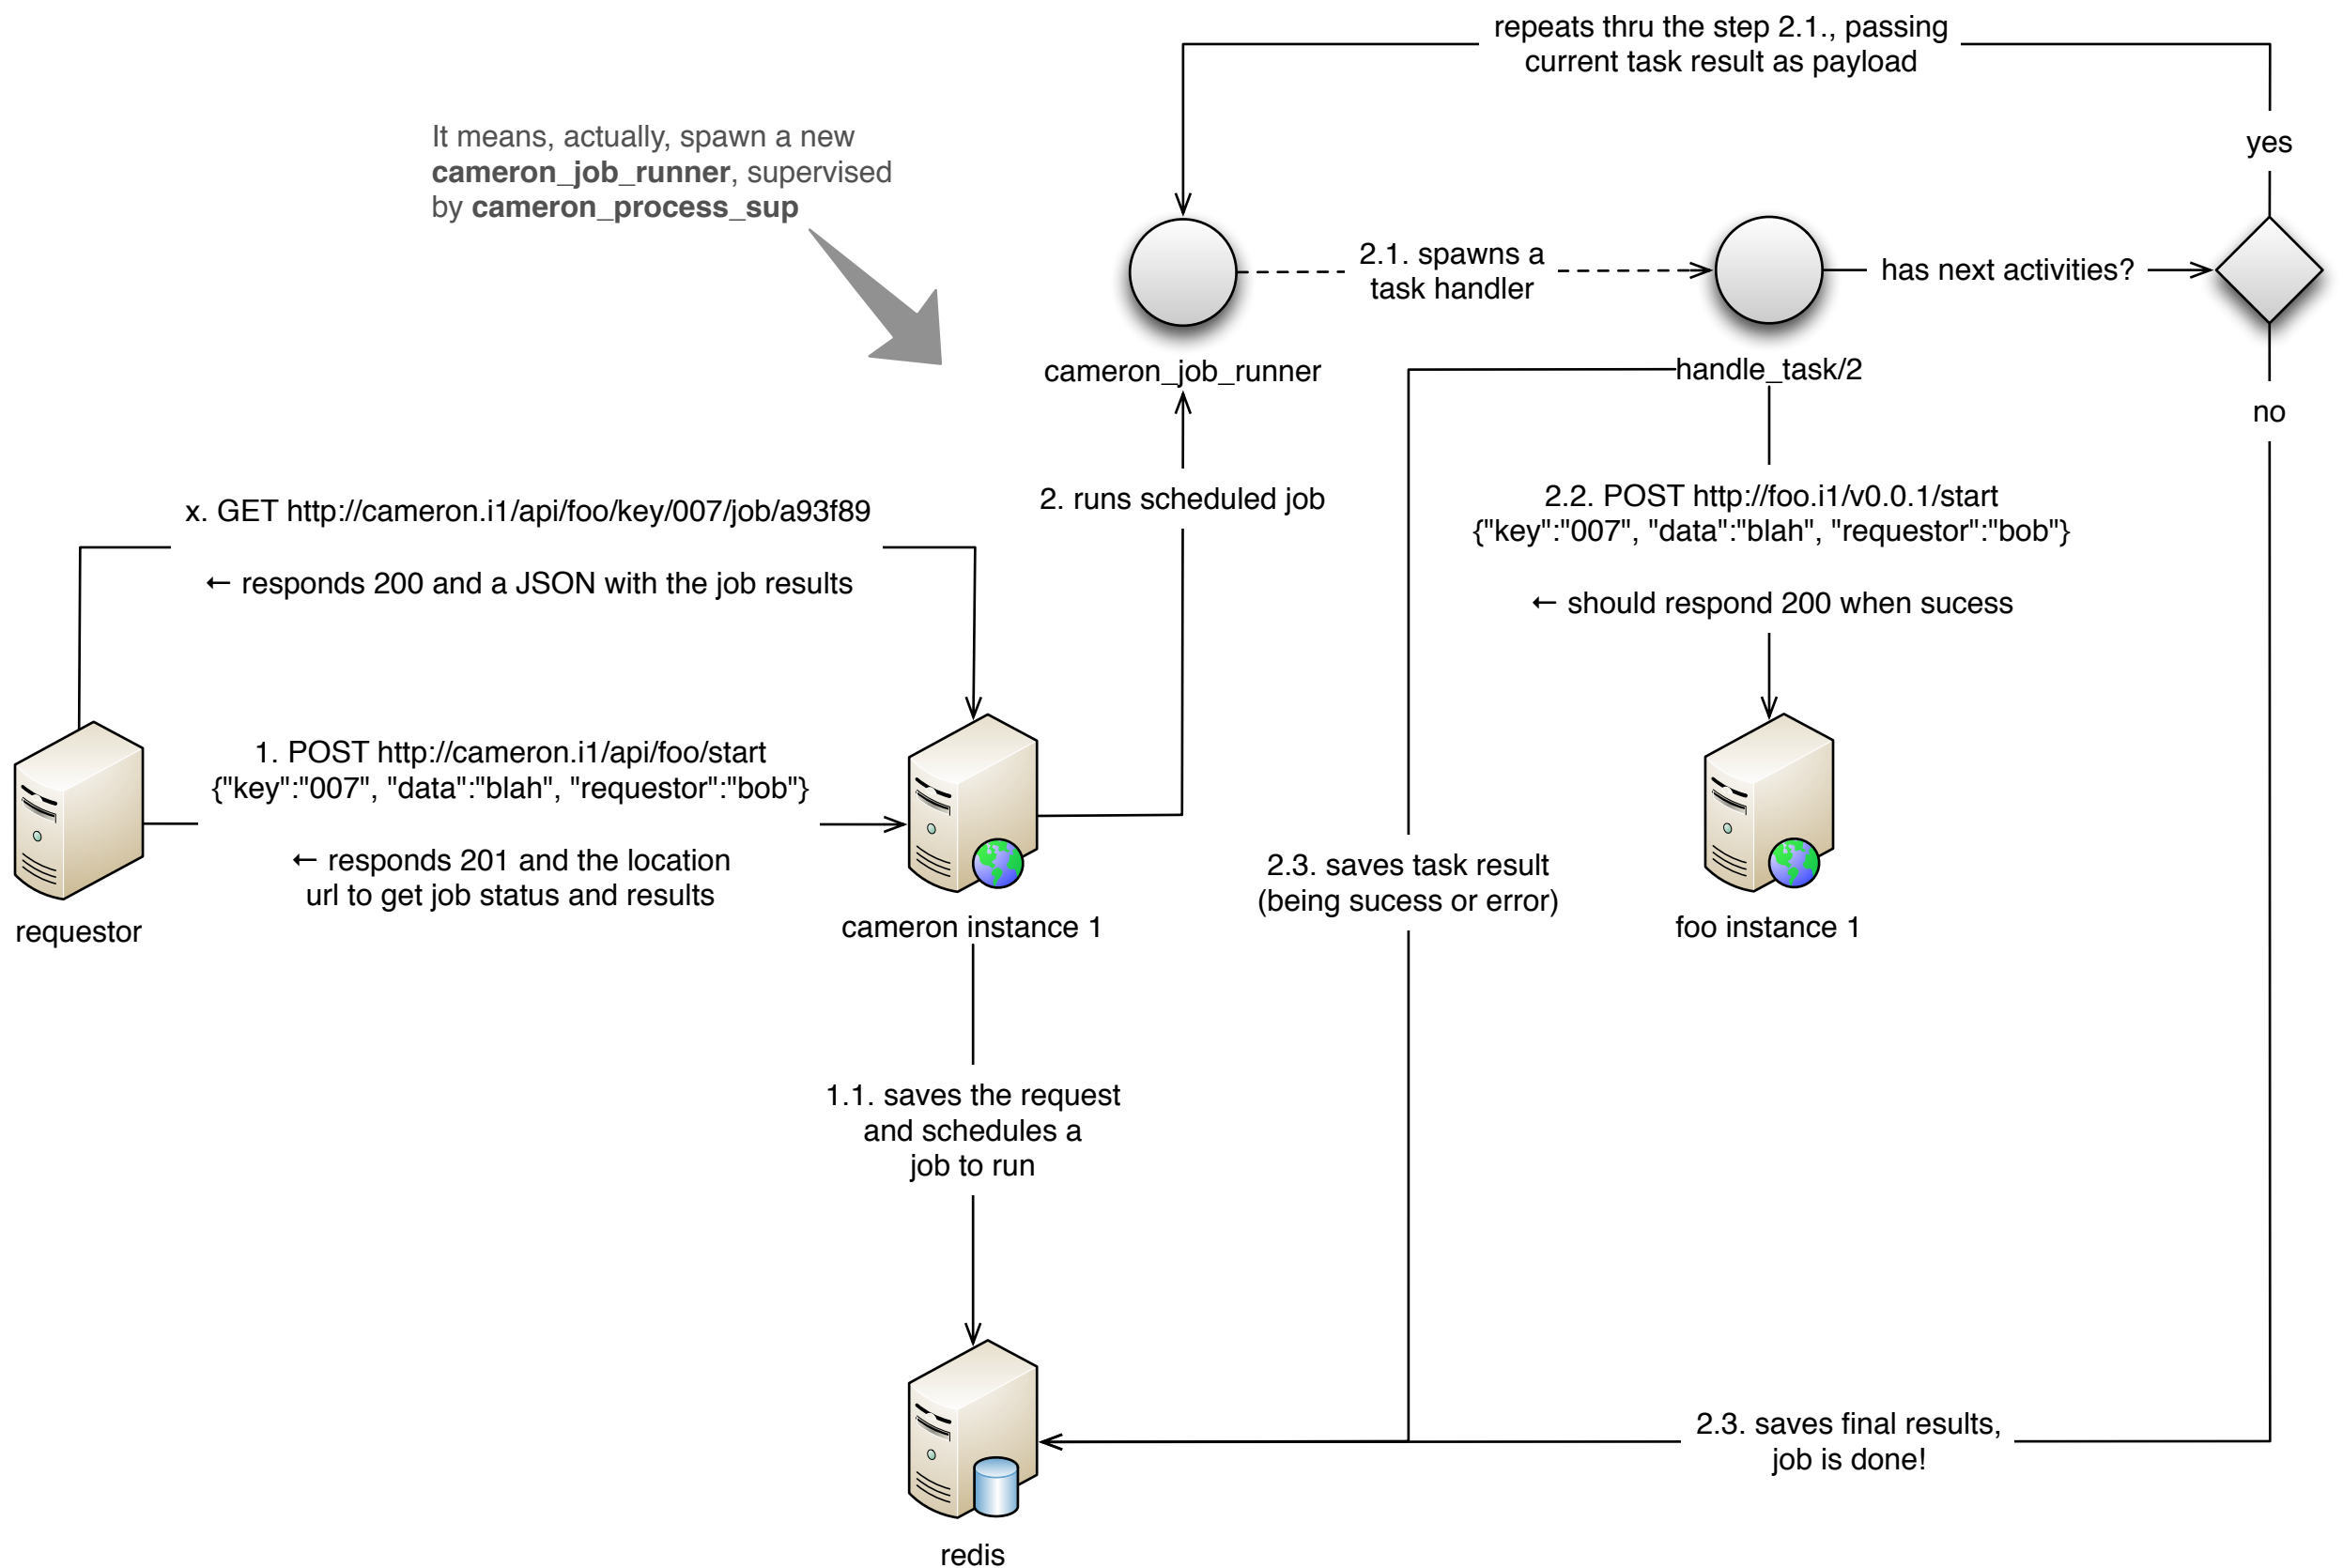

Process Tree

Being more specific...

Actually, it spawns many instances of gen_server **cameron_job_runner** registered as **cameron_{uuid}**

Walking from request to
getting things done...

Which workflow?

Before make a request to a given process workflow, we need to setup it at

config/process/{environment}.config

In this case: {process, [{foo, {start_activity_url, "http://foo.i1/v0.0.1/start"}}]}.

Work in Progress
stay tuned...
